

Installation Guide

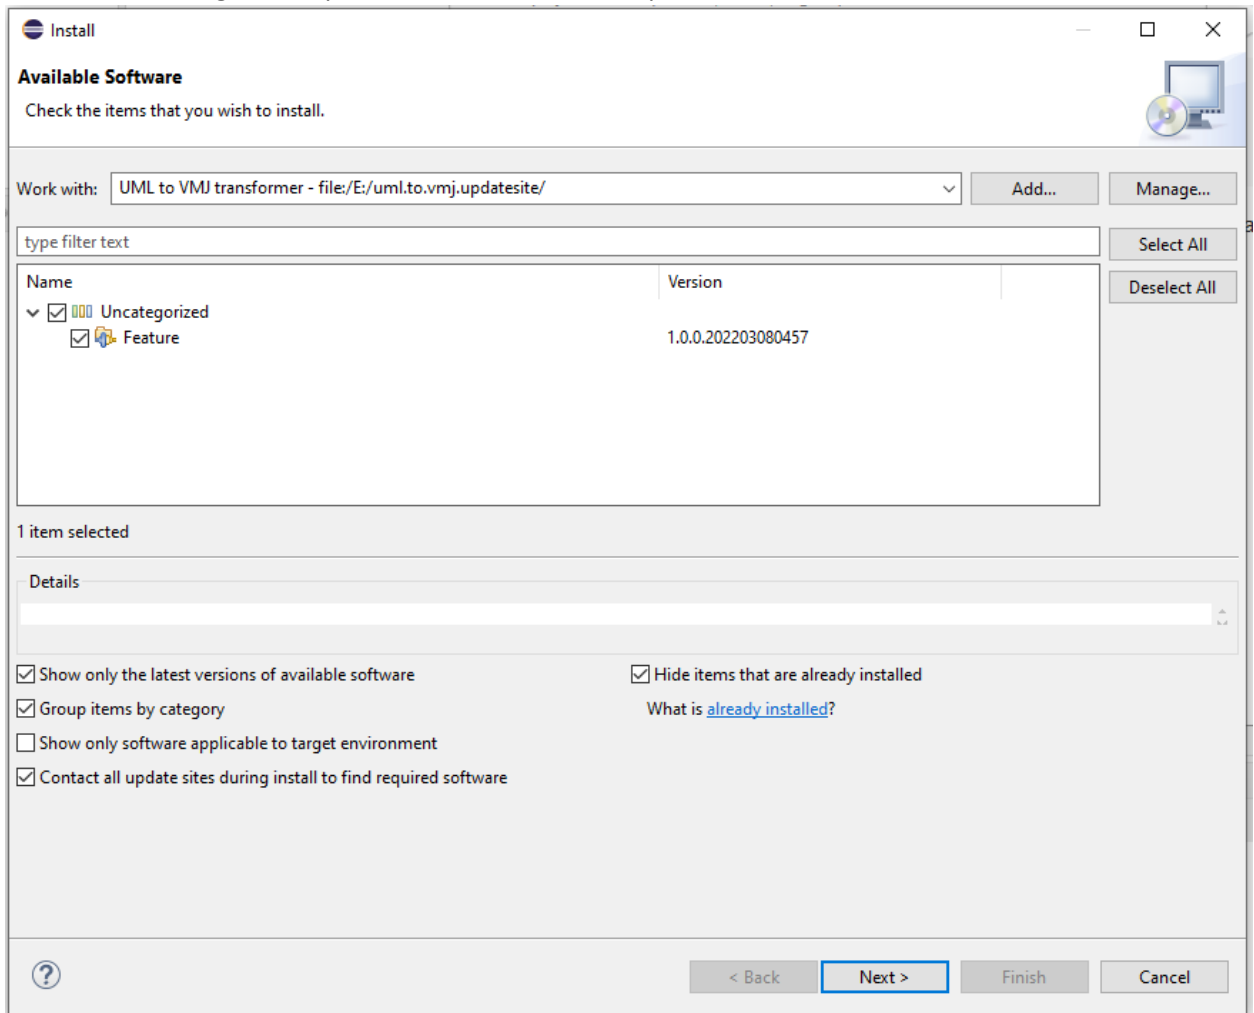

1. Open Eclipse.
2. On the navbar, choose help => install new software.

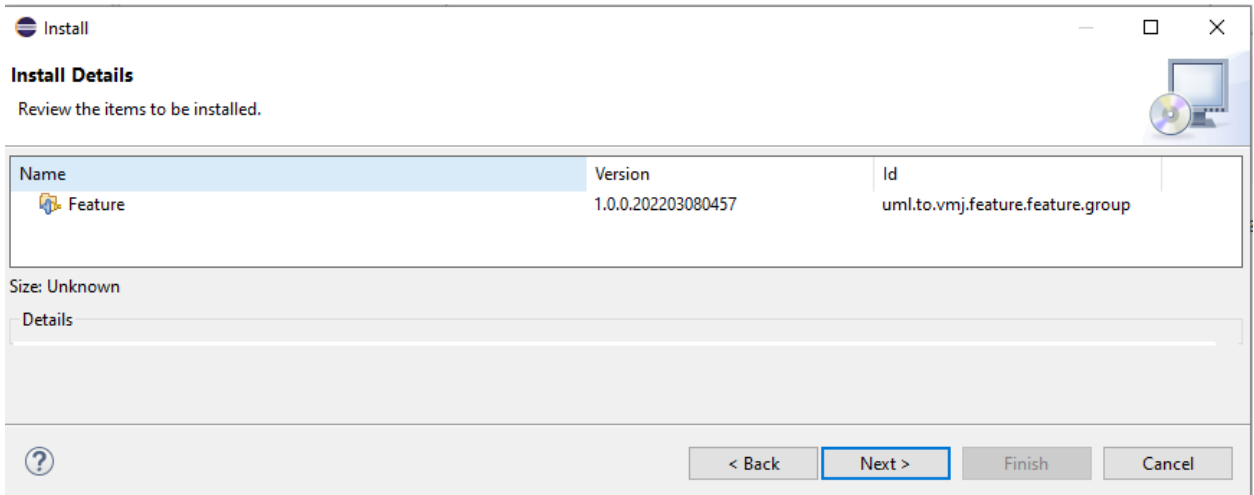

3. Press Add... => on the new popup window press Local... and choose the uml.to.vmj.updatesite folder, fill the name field and press Add

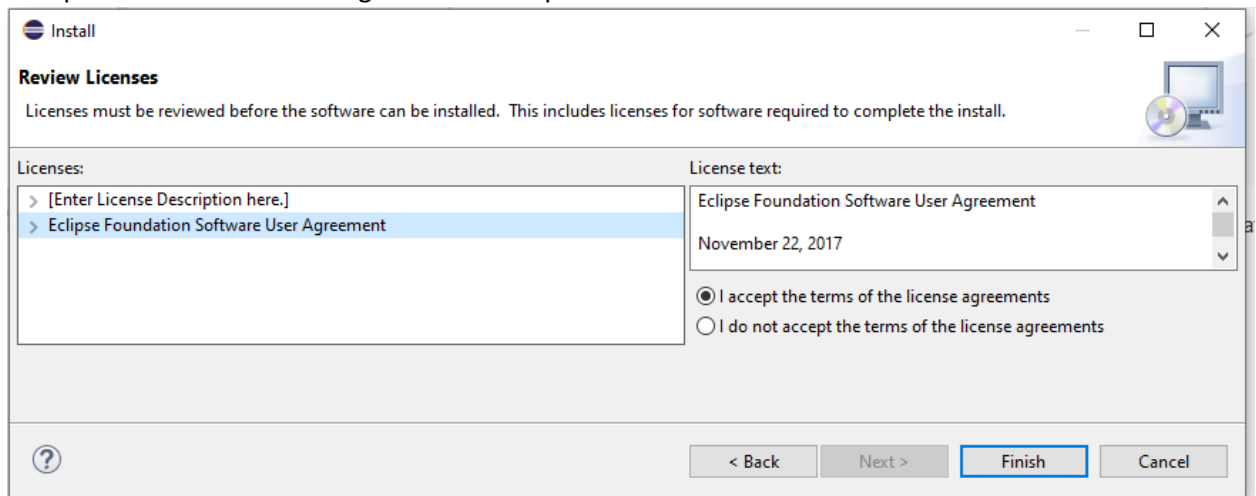

4. Check the Uncategorized option on the checkbox and press Next

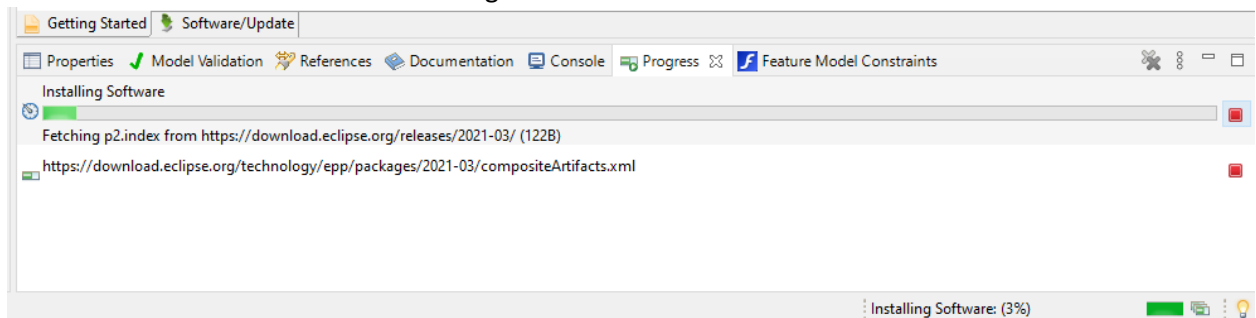

5. Press Next on Install Details

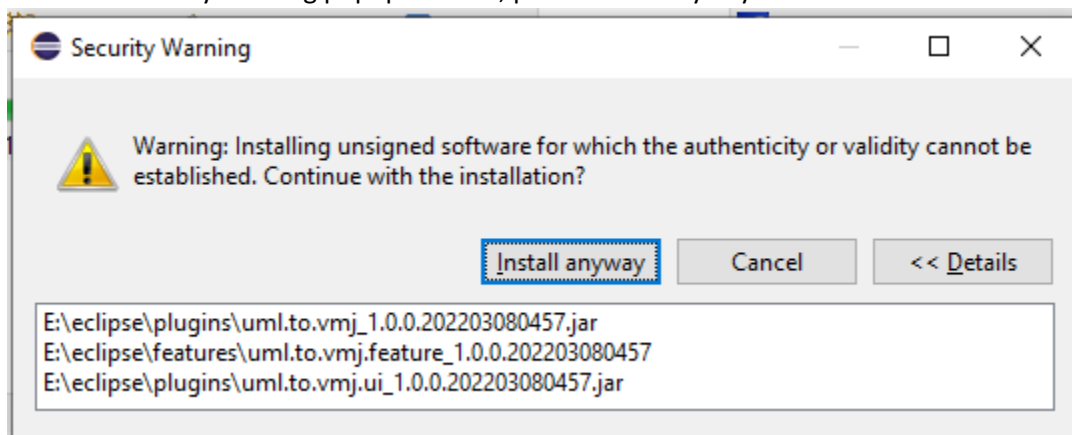

6. Accept the terms of license agreements and press Finish

7. Wait until the software finished Installing

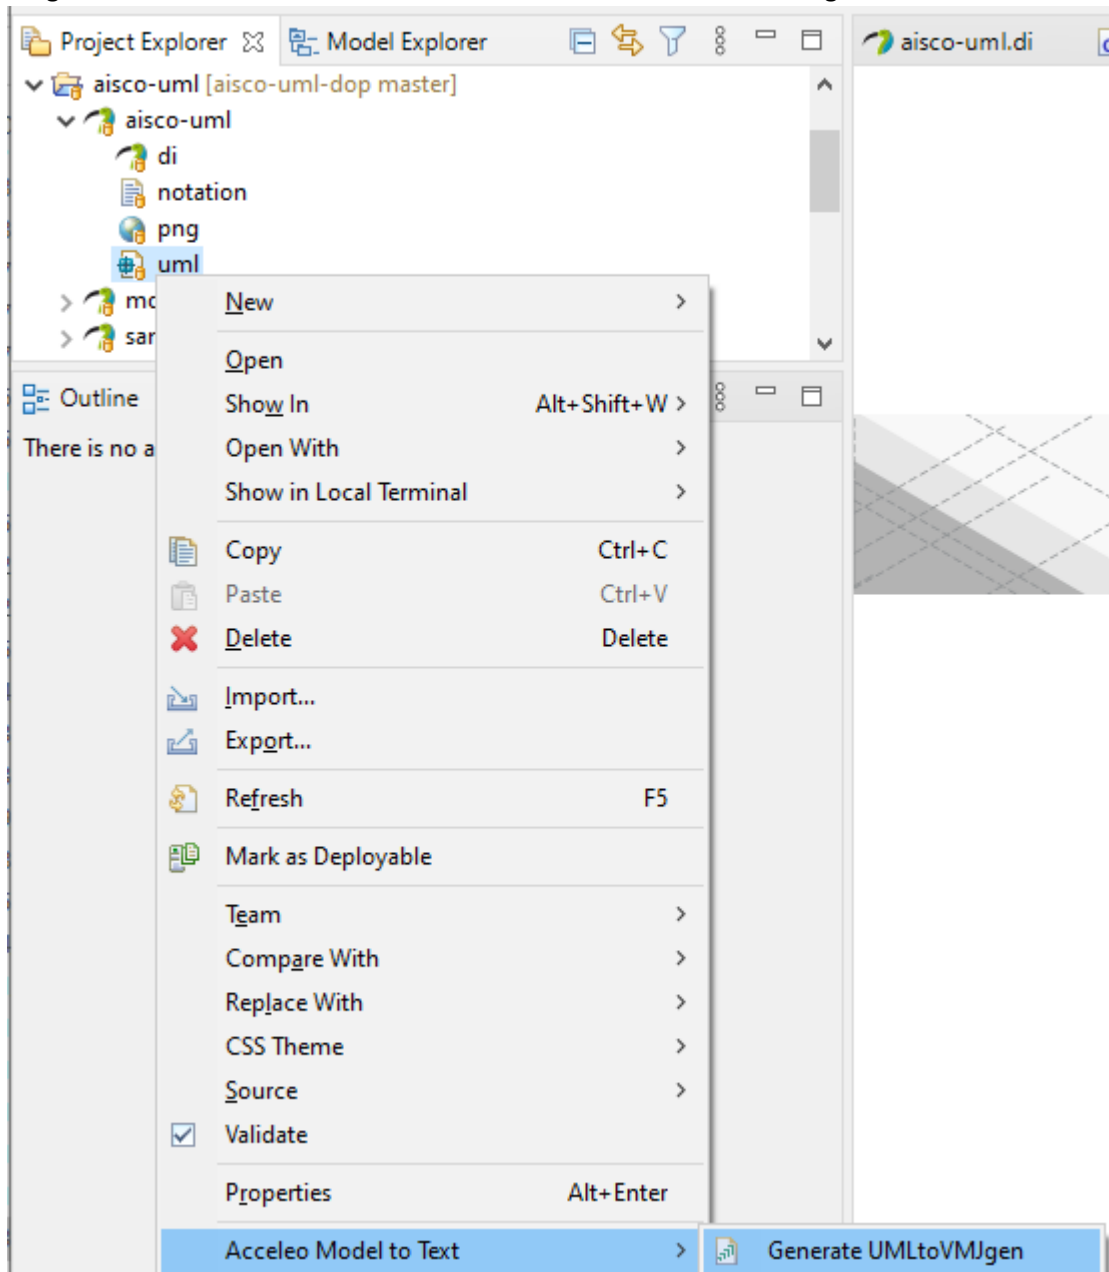

8. If there's security warning popup like this, press Install anyway

9. After the installation completed, eclipse will restart.

10. To use the plug-in to generate VMJ code, right click on your .uml file containing UML-VM Diagram and choose Acceleo Model to Text => Generate UMLtoVMJgen

11. Src-gen folder will be generated containing the VMJ code.
